Climate change is a complex topic that can be intimidating to teach. However, understanding climate, including the ways it is changing and how that impacts the environment, is crucial to making informed decisions and building resilience. This training will introduce climate guides from Projects WET, WILD, and Learning Tree, which include 31 activities to incorporate climate change topics into your lesson plans or programs. This training is open to formal and non-formal educators, and activities are created with middle and high school students in mind.
